

SAKENI (■■■■)

The Modern Student Housing Marketplace for Egypt

Business Plan — Phase 1 MVP Launch

March 2025

1. Executive Summary

Sakeni is a mobile platform (Flutter/Firebase) designed to disrupt the student housing market in Egypt by eliminating the traditional broker layer via a verified, digital, direct-to-owner marketplace.

Starting in high-density university zones like 6th October City, Al-Azhar, and Ain Shams, Sakeni solves a severe pain point: students spending weeks searching through chaotic Facebook groups and paying up to 15% of annual rent in broker fees. For landlords, Sakeni offers a direct channel to serious renters without commission leakage.

The company seeks an initial EGP 100,000 to fund the development and marketing of the MVP, targeting 8,000 students and 700 verified listings within the first 6 months, projecting EGP 600,000 in Year-1 revenues.

2. The Problem

Egypt has 3.5 million university students. The off-campus housing market is currently served almost entirely by unverified Facebook groups and offline brokers.

Student Pain Points:

- Wasted time (3-6 weeks average search) and exposure to scams.
- Heavy broker fees (EGP 3,000-8,000 per year per student).

Landlord Pain Points:

- Broker commissions reduce net rental yields by 8-15%.
- No organized platform to manage inquiries from serious students vs. time-wasters.

3. The Solution

Sakeni is an iOS and Android app offering a seamless, structured housing search experience:

- **Verified Listings:** Every apartment is manually verified by admins before going live.
- **Direct Chat:** Students and owners communicate via in-app chat, preserving privacy.
- **Zero Broker Fees:** Students pay nothing. Owners pay a flat, low-cost subscription.
- **Trust System:** Built-in ratings for both tenants and landlords.

4. Market Opportunity

The immediate (Phase 1) addressable market consists of the ~400,000 out-of-town students requiring housing near 6th October, Al-Azhar, and Ain Shams universities. The annual rental market transaction volume in this segment exceeds EGP 600 Million.

By capturing just 2% of this market in Year 1 (8,000 students), Sakeni establishes a foothold to expand geographically and later horizontally into the general real estate market (a EGP 500B+ industry).

5. Revenue Model

Sakeni operates a Freemium SaaS / B2B2C model:

Revenue Stream	Description	Pricing
Landlord Subscriptions	Monthly access for landlords to list units (First 3 months free)	£150 / month
Featured Ads	Premium visibility placement at the top of student search results	£500 / listing
Security Escrow (Phase 2)	Sakeni holds deposit and takes a processing commission	15% of deposit
Property Sales (Phase 3)	Commission on completed real estate sales through the platform	12% of sale price

6. Go-To-Market Strategy

Supply First: We will conduct a 90-day pre-launch campaign targeting landlords via targeted Facebook ads and direct WhatsApp outreach to existing housing groups. Goal: Seed the platform with 300 verified listings before student launch.

Demand Generation: Execute TikTok localized campaigns and deploy student ambassadors on campus in late August/early September (peak housing search season) to drive rapid app adoption.

7. Financial Projections & Funding

Sakeni requires EGP 100,000 to reach MVP launch and initial liquidity. The capital is aggressively allocated toward product and marketing.

Cost / Investment Area	EGP Amount	% of Total
UI/UX Design	15,000	15%
Flutter Mobile App Dev	50,000	50%
Firebase & Server (6 mos)	10,000	10%
Marketing (Launch)	10,000	10%
Legal, App Store, Admin Tools	10,000	10%
Contingency Reserve	5,000	5%
TOTAL REQUIRED	100,000 EGP	100%

Revenue Projection: By Month 6, we project 150 subscribing landlords and 30 featured ads, generating ~EGP 37,500 MRR, reaching operational break-even.

8. Vision

The Sakeni founding team combines technical expertise in cross-platform mobile development with deep, on-the-ground knowledge of the Egyptian youth demographic and real estate challenges.

Our 4-year vision is to completely intermediate the student housing market in Egypt. By Year 10, we aim to leverage this highly engaged demographic to build Egypt's dominant, trusted digital real estate and prop-tech ecosystem.
